Adobe Sensei AI is a machine and deep learning platform that is transforming Adobe's product portfolio, including Photoshop. The platform uses natural language processing (NLP) capabilities to help Photoshop understand what a user is trying to do and make suggestions for their betterment. Adobe Sensei AI comes with a variety of new features in Photoshop, including: Copy Selection. With this feature, the user can copy the content of the selection to any canvas (even in a new document), creating a new layer on the fly without any manual intervention. Show and Hide Layers. With this feature, users can perform various operations on layers content, such as select and hide/unhide, and even change the layer visibility. Also, from one image (live or archived), users can instantly find the corresponding layers on another image, enabling faster and more efficient live collaboration. Eraser. This feature makes it easy to quickly select the area and material of a painted or drawn object, seamlessly eliminating unwanted content quickly, thus minimizing the risk of accident-prone actions. It also provides a positive status display to ensure the user that the eraser has started its work and has reached the desired result. Spot Healing Brush. This feature enables selective photo editing, often referred to as "the beauty of the photo lies in the imperfections". The Spot Healing Brush uses intelligent algorithms to identify and repair localized areas of texture distortion, contrast and color.
