As for the dedicated menus, they make life much easier because you don't need to adjust your complex (by today's standards) settings for numerous adjustments and for Layer Styles. You simply select your new options from a handful of dedicated menus. It also helps that Photoshop now is not just faster (it's not really noticeable), but it gets more stable. I believe that the folks at Adobe have done a great job fighting the bugs that occurred in the past. And I am glad that there have been no major bugs that have found their way into CS6. The life . The new, 27.3-megabyte update is full of improvements. I won't mince words here - it's one of the best updates I've seen in a very long time. When the new features first became available, I initially balked at making my review public. Like so many people, I thought, "It won't work," "I'll never get used to it," and so on. I was wrong, though. Lightroom 5 has become my easiest-to-use software solution. It has even replaced Capture One, my primary RAW processor, for me. It's that good. Even so, I still had to get over some of the "new" parts. The most noticeable one is a new color comparison option, one called "Large Whites." Using "Large Whites" means that before the image itself is color-corrected, you can apply a white point, lightness and saturation slider to the rendered image alone. Small adjustments to these settings in the former Layers panel allow you to immediately see how the adjustment affects the overall image. It's a little annoying at first to have to use a different panel for the purpose. I'll get used to it, and the feature is truly valuable. Even better, when you select the adjustment slider, the panel doesn't instantly close. You can tweak the setting and immediately see the changes. It's been years since I've seen anything like that or anything that lets you make such accurate changes quickly.

However, what is not possible to escape with Photoshop is that it handles number formats in its characteristic file extension methods and deals with the size by giving way to the increased file sizes all of these processes pose. Content Aware Fill offers a level of content-awareness unique to Photoshop. This gives Photoshop the ability to make educated guesses about what is in the image and fill in the various content areas in the image. This gives even more zip and experience to the designer.
